Criminal Residents of 5805, #2202 Courtyards

Dear Fellow Courtyards Neighbor,

I'm writing to make you aware that the Courtyards has a criminal element that has been operating out of Unit #2202 over the last 9+ months. Several of the neighbors are aware of their presence and activity. The Courtyards Staff has been informed by several neighbors on many occasions of this presence and they continue to do nothing. The building manager has also told one resident not to worry about it. **Their license plates have been ran and brought up criminal history and active investigations going back to Florida. They are a Hybrid Gang that has moved to our community in order to continue their for profit criminal activity. I'm going to summarize some of their criminal activities to make you aware of this criminal element that's operating in our community.**

- Strong Chemical Smells are constantly emanating from Unit 2202. The whole eastern wing of the 2nd floor smells of this odor on a regular basis. The residents of Unit # 2202 are cooking methamphetamine. The smell is a Strong Chemical Odor that has a sweet smell like Ethyl Ether & Acetone and other chemicals used in the process. This poses a great danger to the Courtyards and its residents. Meth Labs are explosive and can cause fires that will spread to other units. The chemicals used are also hazardous to humans and cause respiratory problems and diseases like cancer. There are always people coming and going from this unit, they seem very paranoid and they mostly use the stairways to remain unseen by others. There are up to 10+ people in Unit #2202 at all times and many more coming and going late at night. They are most likely selling meth from the unit as well, that is why people are coming and going. The main person is a Large White Lady and the other Accomplices are mostly Black Males.
- The residents of Unit 2202 also have newborn babies that are constantly coming and going. Many believe they are involved in human trafficking. This means they buy and sell babies. This is also mentioned in their Florida Rap Sheet.
- The residents of Unit 2202 also use copious amounts of narcotics that can be smelled on the 2nd floor including methamphetamine, crack, marijuana, and often a strong paint smell (They Huff Paint).

Now that you've been informed of this criminal element, please keep your eyes open and report any suspicious activity to law enforcement. These are very dangerous people so stay safe and hope that they are soon removed from our community.
